

DRY ICE & MEDIA BLASTING

WHY CHOOSE DRY ICE AND MEDIA BLASTING?

At Pure Pressure Industrial, we offer advanced dry ice and media blasting solutions designed to remove the toughest contaminants without damaging underlying surfaces. This cutting edge process delivers powerful results while remaining safe, efficient, and environmentally responsible.

HOW DOES IT WORK?

Dry ice blasting uses CO2 pellets at high speeds, instantly breaking down and lifting away materials such as asphalt buildup, grease, oil, and industrial residue. Because the dry ice sublimates on contact, it leaves no secondary waste, no moisture, and no chemical residue, making it ideal for sensitive equipment and high-value assets.

FOR HEAVIER REMOVAL APPLICATIONS, OUR MEDIA BLASTING SERVICES PROVIDE CONTROLLED ABRASION USING SPECIALIZED MATERIALS TO STRIP COATINGS, CORROSION, AND HARDENED BUILDUP FROM CONCRETE, STEEL, AND OTHER SURFACES

THIS SERVICE IS IDEAL FOR:

- Asphalt and Tar removal from equipment and surfaces
- Concrete surface preparation and cleaning
- Paint and Coating Removal
- Industrial Equipment Restoration
- Heavy grease, oil, and residue removal

Whether you are maintaining paving equipment, restoring surfaces, or preparing materials for repainting or coating, Pure Pressure Industrial delivers precision results with minimal downtime.

WE COMBINE INDUSTRY EXPERTISE, HIGH PERFORMANCE EQUIPMENT, AND A COMMITMENT TO QUALITY TO ENSURE EVERY JOB IS COMPLETED TO THE HIGHEST STANDARD.
